TO WHOM IT MAY CONCERN

This is to certify that our Company has used Dipetane Fuel Treatment in twenty-four Ford six cylinder trucks for over one year.

MPG

With our professional transport Management system, we carried out an accurate pre-Dipetane monitoring on MPG for three months. Subsequently we treated our diesel with Dipetane and continued on monitoring on our regular daily basis. We confirm that our MPG figures have shown an overall average improvement in MPG of 17% over the past nine months. Our ongoing MPG monitoring systems confirm that this improvement has been maintained.

MAINTENANCE

During the last twelve months with Dipetane treated fuel, we have had no engine overhauls; no injectors have had to be changed. We are also pleased to note that during this time, our twenty-four trucks on Dipetane treated fuel have reduced their smoke output to practically nil overall. Dipetane treated fuels have contributed to a significant net saving in Fuel and maintenance costs.

Yours sincerely,

PAT SLATTERY
Transport Manager
