

DIPETANE FUEL TECHNOLOGY A GAME CHANGER FOR DIESEL

Dipetane navigates climate change issues with greater certainty and outcome by upgrading all Fossil Fuels. This includes Petrol, Diesel, Heating Oil, Kerosene and Heavy Oil.

Dipetane equalises and stabilises the carbon chains in fuels, which allows more of the incoming 21 Units of Oxygen in the air, to attach to the carbon chains, thereby enabling a more complete combustion.

Dipetane's more complete combustion creates better lubricity and compensates for the 90% reduction in Sulphur in fuel, as directed by the EU. This is a win-win as the cost of treating fuel with Dipetane is far outweighed by the advantages of improved output* and of reduced NOx CO² and CO.

Dipetane helps to protect our environment and health

By Reducing
NOx by up to 30%*, CO² by up to 25%*
PM's by up to 24%* (Carcinogens)
Smoke by up to 60%*
ONLY Dipetane Treated Fuels can achieve this*

Dipetane helps to protect engine parts

Injectors, Valves & Pumps are better protected against Low Sulphur Fuels through Extra Lubricity created by the use of Dipetane
EGR's, DPF's and Catalytic Converters are kept cleaner*
Helping to pass MOT, NCT and DOE Smoke & Emission Tests*
ONLY Dipetane Treated Fuels can achieve this

Dipetane encourages the use of Cleaner Fossil Fuels

It is vital to encourage the use of cleaner Fossil Fuels which is one of the Oil Industry's prime objectives as Wind, Solar and Biomass Fuels are and will continue to be, minor energy providers.

Dipetane Greatly Reduces GHG's* and Smoke* which will encourage more use of Cleaner Fossil Fuels by Government Bodies, Local Authorities, Transport, Industry and Shipping.
ONLY Dipetane Treated Fuels can achieve this*

*All of Dipetane's claims are based on 30 years of extensive Field Trials

**D.M.D. Sales Ltd,
Unit 5 Kilcoole Ind. Est., Kilcoole,
Co. Wicklow, A63 HP7I, Ireland.
